

# Oral Cancer Detection Report

## Prediction Results

| Parameter             | Value         |
|-----------------------|---------------|
| Prediction            | Risk (Cancer) |
| Confidence            | 87.11%        |
| Pain Level            | Mild          |
| Bleeding              | Yes           |
| Swelling              | Mild          |
| Duration              | 7             |
| History               | none          |
| Habits                | Smoking       |
| Smoking Years         | 6             |
| 3 Finger Trismus Test | Pass          |
| Pain Opening Mouth    | Yes           |
| Extra Details         | h             |

## Clinical Observation

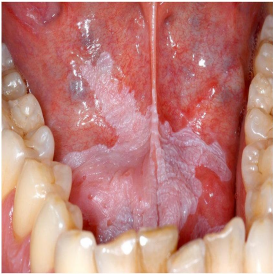

| Parameter        | Observation                 |
|------------------|-----------------------------|
| Location         | Soft palate                 |
| Coloration       | Red patch (erythroplakia)   |
| Surface          | Irregular, mildly ulcerated |
| Approximate Size | 1.0 x 0.8 cm                |
| Suggested Stage  | T1                          |

## Summary

Based on the uploaded image and provided symptoms, the system predicts a HIGH RISK of oral cancer. Clinical observation suggests the lesion is located at Soft palate, with a surface described as Irregular, mildly ulcerated and coloration as Red patch (erythroplakia). The approximate size is 1.0 x 0.8 cm, and the suggested stage is T1. It is strongly recommended to consult a specialist for further evaluation and management.
